EDUCATION

• Indian Institute of Information Technology, Jabalpur

Bachelor of Technology

2023 – 2027

CGPA: 7.8

TECHNICAL SKILLS

Programming Languages: C, C++, Python, Java, JavaScript, TypeScript, SQL

Web Technologies: HTML5, CSS3, React.js, Node.js, Express.js, Tailwind CSS, Vite

Machine Learning / AI: RAG, Agentic AI, LLM Applications, Vector Databases, Qdrant, Embeddings

Frameworks & Libraries: FastAPI, Django, Colyseus, gRPC, Protocol Buffers, LangChain, LangGraph

Tools & Platforms: MongoDB, PostgreSQL, MySQL, Mongoose, Drizzle ORM, Redis, Git, Docker, CMake, Postman, Linux

Core CS Fundamentals: Data Structures & Algorithms, OOPS, DBMS, Operating Systems, System Design, Cloud Computing

PERSONAL PROJECTS

• Hashnet - Real-time Distributed RAG-based Multiplayer Coding Platform

2025 – 2026

(Developer — React.js, TypeScript, Colyseus, Node.js, Express.js, MongoDB, Monaco Editor, Qdrant, Render, vercel, Git)

- Designed and implemented a **real-time multiplayer** coding platform using Colyseus and WebSockets with Fossil Delta binary compression, reducing network payload by **98%** per tick.
- Developed an **Agentic RAG pipeline** using **Cohere embeddings**, **Qdrant** vector database, and **OpenRouter LLM** to parse uploaded PDFs and auto-generate coding challenges into MongoDB.
- Designed a full-stack application with React.js, Node.js, Express.js, and JWT authentication, supporting **real-time leaderboards** and multiplayer matchmaking.

• CosmoKV - High-Performance Sharded Distributed Key-Value Store

2025 – 2026

(Systems Engineer — C++11, gRPC, Protobuf, CMake, POSIX Threads, WAL, Consistent Hashing)

- Built a **fault-tolerant, sharded, distributed key-value store** in **C++** using **gRPC** and **Consistent Hashing** with Virtual Nodes for scalable data partitioning.
- Implemented **Write-Ahead Logging (WAL)** for crash recovery and **client-driven Read Repair** to maintain replica consistency across storage nodes.
- Designed a **control/data plane architecture** with configurable replication, automatic failover, and concurrent request handling using POSIX readers-writer locks.

• Toopz: University Social Collaboration SaaS

2024 – 2025

(Full-Stack Engineer — Tech Stack: React.js, Node.js, Express.js, PostgreSQL, Drizzle ORM, Redis, Socket.IO, JWT)

- Developed a **full-stack SaaS platform** with stateful **JWT authentication**, refresh token rotation, and **role-based access control** for university-scale user management.
- Built a **real-time messaging engine** using **Socket.IO** with synchronized typing indicators, read receipts, and media attachment support.
- Optimized database performance using **Redis caching** and connection pooling with **PostgreSQL** and **Drizzle ORM**, reducing API latency by **40%**.

ACHIEVEMENTS & AWARDS

- HackByte 4.0** - Top 6 Finalist (AI Code Provenance Track)
- Solved **1500+** problems across Codeforces (Specialist, max 1484) and LeetCode (Knight, max 1910).
- Awarded MCM Scholarship (Merit-cum-Means) in first year at IIIT Jabalpur

CERTIFICATIONS

- Supervised Machine Learning & Neural Networks and Deep Learning — Andrew Ng (Stanford/DeepLearning.AI)
- Cloud Computing & Computer Networks — NPTEL

LEADERSHIP & EXTRACURRICULARS

- Led Team Pwrbtn in Hackbyte 4.0 & Team Yantrik Vignan in Robo Rush (robotics competition, IIIT Jabalpur)
- Led PR & EDP Project Groups and successfully delivered college-level initiatives
